and valley draws.

water from reaching in and smell from letting out. Furthermore, about specific activities on offer. of the waste, are directed into the nearby incinerator rather than let proposal for new uses and identity. out in the open air.

NEW WAYS OF LIFE - COMPETITION TASK

the city center of Oslo, and is surrounded by forest areas and, ridges and ways of participation that are new to the general perception of disused disposal site, and at the same time preserving its history Over 40 years of accumulated waste has filled up the landscape, and is and culture from completely new premises. Grønmo is a man-made today covered by a thin, green dressed, top cover preventing surface landscape that has no history of recreational or built-in expectations understanding and awareness of waste issues and recycling potential

over 200 gas wells perforate the mounds of Grønmo, making sure The competition asks for innovative responses on two interrelated the continuous methane discharges, due to the anaerobic digestion tasks: a concept and design of the overall landscaping plan, and a

What can the new Grønmo become?

NEW SUSTAINABLE DEVELOPMENT

Grønmo landfill is located in the district of Søndre Nordstrand outside Grønmo offers a unique opportunity to create an area with activities. The assignment is to create a challenging recreational area on a green experiences. It is possible to define sports, movement, nature by continuing the recycling facility and to facilitate for an exciting learning arena. The learning area shall be designed to help increase and challenge users to find creative new solutions for waste minimization and recycling. As the city of Oslo grows, the need of good recreational areas increases. "Recapture Grønmo" represents a unike possibility to provide better living standards in a quickly growing suburban area.
